

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

DISORDERS OF HAIR

Hair

- * Definition :

Keratinized product of hair follicle

- * Function :

Social & sexual function

- * Development & distribution :

Starts in 9th week in embryonic life in eyebrows, upper lip and chin, and then in other regions in 4th month

* Types of hair :

- 1- Lanugo
- 2- Vellus
- 3- Terminal

* Hair cycle and its control :

Alopecia

* Definition:

Loss of hair from normally hairy regions

* Alopecia divided into:

1- Cicatricial alopecia

2- Non -cicatricial alopecia

Cicatricial alopecia

- It results from destruction of hair follicles by scar tissue formed in the scalp

* Clinical picture:

- Presence of scarring
- Evidence of the cause
- It is a permanent condition

* Etiology:

a) Congenital

b) Acquired:

1) Trauma

- Mechanical
- Thermal e.g burns
- Physical e.g radio dermatitis

2) Infection

- Pyogenic (abscess)

- Fungal (kerion and favus)
- Bacillary (LV)
- Spirochaetal (gumma)

3) Collagen disease

- DLE of the scalp
- Scleroderma (morphea)

4) Diseases of unknown etiology

- Pseudopelade
- Folliculitis decalvans

DLE

DLE - Cicatricial alopecia

Folliculitis decalvans

Non-cicatricial alopecia

* Etiology:

A) Congenital causes:

Congenital atrichia

Congenital hypotrichia

B) Acquired causes:

1) Circumscribed:

- Alopecia areata
- Infections eg Tinea capitis , secondary syphilis
- Traumatic (Trichotillomania)

2) Diffuse:

- 1) Telogen effluvium
- 2) Anagen effluvium
- 3) Androgenetic alopecia
- 4) **Endocrinal**(Hypopituitarism, Hypothyroidism, Hyperthyroidism)
- 5) **Drugs** (thyroid antiagonists, anticoagulants, arsenic and thalium salts)
- 6) **Nutritional and metabolic disorder**(deficiency of iron, zinc or protein)
- 7) **Severe chronic illness** (malignancy, liver diseases, renal diseases)

2ry \$ (Moth-eaten alopecia)

Trichotillomania

Trichotillomania

Alopecia areata

* Definition:

It is a common a symptomatic disease characterized by rapid (Sudden) onset of hair loss in a sharply defined area

* Etiology:

The etiology is unknown but many factors appear to have a role

- Genetic factors
- Immunological factors
- Emotional stress

* Clinical picture

*** Clinical types:**

- Alopecia localisata
- Alopecia totalis
- Alopecia universalis
- Ophiasis

Exclamation mark

DOIA

*** Management of AA :**

1) Reassurance

2) Topical treatment :

a- Steroid

b- Contact immunotherapy (DNCB, DPCP)

c- Irritants: as dithranol

d- Minoxidil

e- Cyclosporine

3) Intralesional steroid

4) PUVA

5) Systemic steroid & cyclosporine

Androgenetic alopecia

* **Definition:** Physiological process in a genetically predisposed individuals

* **Etiology:**

- 1- Genetic predisposition
- 2- Androgen stimulation

* **Clinical picture :**

- 1- Male pattern
- 2-Female pattern

Vertex

*** Diagnosis:**

- 1- Family history & pattern of hair loss
- 2- Trichogram & scalp biopsy

*** Management :**

- 1) Topical minoxidil
- 2) Surgical treatment :

Scalp reduction & hair transplant

- 3) Camouflage

Telogen effluvium

* Definition:

Excessive loss of normal hairs following stress conditions as many anagen hair follicles enter prematurely into telogen

* Causes:

- 1- Labor
- 2- High fever
- 3- Acute blood loss & surgical operations
- 4- Emotional stress
- 5- Crash diet (inadequate protein diet)

*** Clinical picture:**

Diffuse shedding of hair after 1.5 to 4 months of exposure to stressful condition, in telogen phase

*** Prognosis:**

Good as complete regrowth of hairs occur in about 6 months

Imagine having a hair this long how long would it take
you to wash it and comb !!!

**THANK
YOU**
