Basic Information about the Block

• Program on which the course is given:

Bachelor of Medicine and Surgery (M.B. B.Ch.).

• Elements (major or minor) of the program:

Undergraduate

• Departments offering the course:

Internal medicine and Chest diseases.

Academic. year/level:

5th year.

Prerequiestes

Achieving 75% of points of blocks in the first 5 semesters

Date of specification approval:

2024 - 2025

OTitle: Medicine 1V

ΘCode: (MCC- 531)

Θ Credit points: 6.5

OLectures: 32 hours

OPracticals: 42 hours

OCase based discussions: 31 hours

ΘStudent learning activities:98 hours

83 hours for Portfolio Tasks (7 marks for cardiology / 6 marks for pulmonology):

- Attendance
- Formative assessment 0.5 point= 15 hours.
- Case presentations
- Θ Total: 195 hours.

NARS competencies covered by the block Clinical Rotations (Blocks)/ Competencies

The competency areas of the NARS- Medicine competency framework are:

- 1- The graduate as a health care provider.
- 2- The graduate as a health promoter.
- 3- The graduate as a professional.
- 4- The graduate as a scholar and scientist.
- 5- The graduate as a member of the health team and a part of the health care system.
- 6- The graduate as a lifelong learner and researcher.

Upon completion of this course students should be able to:

	NARS	ILO
		Type
The graduate as a health care	1.1. Take and record a structured, patient	C
provider.	centered history.	
	1.2. Adopt an empathic and holistic	C
	approach to the patients and their problems.	
	1.3. Assess the mental state of the patient.	C
	1.4. Perform appropriately timed full	C
	physical examination of patients	
	appropriate to the age, gender, and clinical	
	presentation of the patient while being	
	culturally sensitive.	
	1.5. Prioritize issues to be addressed in a	A&C
	patient encounter.	

1.6. Select the appropriate investigations	A&C
and interpret their results taking into	
consideration cost/ effectiveness factors.	
1.7. Recognize and respond to the	D&C
complexity, uncertainty and ambiguity	
inherent in medical practice.	
1.8. Apply knowledge of the clinical and	A
biomedical sciences relevant to the clinical	
problem at hand.	
1.9. Retrieve, analyze, and evaluate	D&C
relevant and current data from literature,	
using information technologies and library	
resources, in order to help solve a clinical	
problem based on evidence (EBM).	
1.10. Integrate the results of history,	A&C
physical and laboratory test findings into a	
meaningful diagnostic formulation.	
1.11. Perform diagnostic and intervention	C
procedureC2 in a skillful and safe manner,	
adapting to unanticipated findings or	
changing clinical circumstances.	
1.12. Adopt strategies and apply measures	C
that promote patient safety.	
1.13. Establish patient-centered	A&C
management plans in partnership with the	
patient, his/her family and other health	
professionals as appropriate, using	
Evidence Based Medicine in management	
decisions.	
1.14. Respect patients' rights and involve	C&D
them and /or their families in management	
decisions.	
1.15. Provide the appropriate care in cases	A&C
of emergency, including cardio-pulmonary	
resuscitation, immediate life support	
measures and basic first aid procedures.	
1.16. Apply the appropriate	A&C
pharmacological and nonpharmacological	
approaches to alleviate pain and provide	
palliative care for seriously ill people,	
aiming to relieve their suffering and	
improve their quality of life.	1.0.0
1.17. Contribute to the care of patients and	A&C
their families at the end of life, including	

	management of symptoms, practical issues of law and certification.	
The graduate as a health	2.7 Provide care for specific groups	D&C
promoter.	including pregnant women, newborns and	200
promoteri	infants, adolescents and the elderly.	
	2.9 Adopt suitable measures for infection	A&C
	control.	
The graduate as a professional	3.1. Exhibit appropriate professional	D
	behaviors and relationships in all aspects of	
	practice, demonstrating honesty, integrity,	
	commitment, compassion, and respect.	
	3.2. Adhere to the professional standards	D&C
	and laws governing the practice, and abide	
	by the national code of ethics issued by the	
	Egyptian Medical Syndicate.	
	3.3. Respect the different cultural beliefs	C
	and values in the community they serve.	
	3.4. Treat all patients equally, and avoid	C&D
	stigmatizing any category regardless of	
	their social, cultural, ethnic backgrounds,	
	or their disabilities.	
	3.5. Ensure confidentiality and privacy of	D
	patients' information.	-
	3.7. Recognize and manage conflicts of	D
	interest.	4 0 D 0 G
	3.8. Refer patients to appropriate health	A&D&C
	facility at the appropriate stage.	D
	3.9. Identify and report any unprofessional	D
	and unethical behaviors or physical or	
	mental conditions related to himself,	
	colleagues or any other person that might jeopardize patients' safety.	
The graduate as a scholar and	4.5 Identify various causes (genetic,	A
scientist	developmental, metabolic, toxic,	Λ
Scientist	microbiologic, autoimmune, neoplastic,	
	degenerative, and traumatic) of	
	illness/disease and explain the ways in	
	which they operate on the body	
	(pathogenesis).	
	4.6 Describe altered structure and function	A
	of the body and its major organ systems	
	that are seen in various diseases and	
	conditions.	
	4.7 Describe drug actions: therapeutics and	A
	pharmacokinetics; side effects and	

	interactions, including multiple treatments,	
	long term conditions and non-prescribed	
	medication; and effects on the population.	
The graduate as a member of the	5.1 Recognize the important role played by	C&D
health team and a part of the	other health care professions in patients'	
health care system	management.	
nearth care system	5.2 Respect colleagues and other health	C&D
	care professionals and work cooperatively	5552
	with them, negotiating overlapping and	
	shared responsibilities and engaging in	
	shared decision-making for effective	
	patient management.	
	5.3 Implement strategies to promote	C&D
	understanding, manage differences, and	CCD
	resolve conflicts in a manner that supports	
	collaborative work.	
	5.4 Apply leadership skills to enhance team	C&D
	functioning, the learning environment,	000
	and/or the health care delivery system.	
	5.5 Communicate effectively using a	C&D
	written health record, electronic medical	
	record, or other digital technology.	
	5.6 Evaluate his/her work and that of others	G
	using constructive feedback.	
	5.7 Recognize own personal and	C&D
	professional limits and seek help from	
	colleagues and supervisors when necessary.	
	5.9 Use health informatics to improve the	D
	quality of patient care.	
	5.10 Document clinical encounters in an	D
	accurate, complete, timely, and accessible	
	manner, in compliance with regulatory and	
	legal requirements.	
	5.12 Demonstrate accountability to	D
	patients, society, and the profession.	
The graduate as a lifelong learner	6.1 Regularly reflect on and assess his/her	D
and researcher	performance using various performance	
	indicators and information sources.	
	6.2 Develop, implement, monitor, and	D
	revise a personal learning plan to enhance	
	professional practice	ъ
	6.3 Identify opportunities and use various	D
	resources for learning.	A 0 D
	6.4 Engage in inter-professional activities	A&D
	and collaborative learning to continuously	

improve personal practice and contribute to collective improvements in practice.	
6.5 Recognize practice uncertainty and	A&D
knowledge gaps in clinical and other	
professional encounters and generate	
focused questions that address them.	
6.6 Effectively manage learning time and	D
resources and set priorities.	
6.10 Summarize and present to professional	D
and lay audiences the findings of relevant	
research and scholarly inquiry.	

Block Aims

Overall Aims

- 1. This block aims to provide students with fundamental knowledge and clinical skills that enable him/her to detect, manage and/or refer common and important cardiology disorders and pulmonary medicine.
- 2. By the end of the blocks, the students will be able to take informative history, perform appropriately timed physical examination of patients appropriate to the age, gender, and clinical presentation of the patient while being culturally sensitive, do some clinical procedures and interpret important investigations related to cardiology disorders and pulmonary medicine.
- 3. By the end of the blocks, the students will be able counsel patients and their families about common cardiology disorders and pulmonary medicine.

Learning Outcomes of the Block:

Each competency will be broken down into one or more learning outcomes that may be A, C or D or all.

NARS Key	Learning outcomes for	Domain	Teaching	Assessment
competencies	each key competencies	Know,	method	method

		Know how,		
		Show how,		
1.1. Take and record a structured, patient centered history.	C1. Perform a focused history based on all relevant information (including obtaining data from secondary sources) in the following common clinical problems: COPD patient Asthma patients Pneumonia Suppurative Lung Diseases Tuberculosis Idiopathic Pulmonary Fibrosis Lung Tumors Respiratory Failure	Does Show how	Skill lab or bed side Mini - CEX training OSCE training	Portfolio OSCE ACC
	 Pulmonary Embolism Pleural Effusion Mediastinal Diseases Pneumothorax and Pleural Tumors Sleep Disorder Diabetes mellitus Heart failure Valvular heart disease (native and prosthetic) Infective endocarditis Hypertension Chest pain and stable angina Acute coronary syndromes Cardiac rhythm disturbances Pulmonary hypertension and core pulmonale Myocardial and pericardial diseases C2. 	Show how	Skill lab or	Portfolio
	Document and present the clinical encounter (case) concisely in an oral	SHOW HOW	bed side Mini - CEX training	OSCE ACC

	presentation, as a written document, and entered into an electronic medical record in the following common clinical problems: -Clinical problems Mentioned in C1.		OSCE training	
1.2. Adopt an empathic and holistic approach to the patients and their problems.	A1. D1. Address psychological and social factors when assessing patients and developing care plans in any clinical situations Mentioned in C1 &C10	Know how Show how	Cases Skill lab or bed side Mini - CEX training OSCE training	Quizzes Formative written Final written Portfolio OSCE ACC
	D2. Interact with patients showing 7 key tips of empathic and holistic approach: • Making eye contact • Let your patient know you're listening • Be aware of your body language • Be curious about your patient • Record details that humanize your patient • Show support to your patient • Look deeper for ways to empathize with your patient	Show how	Skill lab or bed side Mini - CEX training OSCE training	Portfolio OSCE ACC
1.3 Assess the mental state of the patient.	C4. Establish that patients are attentive—eg, by assessing their level of attention while the history is taken or by asking them to immediately repeat 3 words	Show how	Skill lab or bed side Mini - CEX training OSCE training	Portfolio OSCE ACC
	C5. Perform an assessment of vital signs	Show how	Skill lab or bed side Mini - CEX training	Portfolio OSCE ACC

Methods of Student Assessment

1. Formative:

This is used to monitor student's learning to provide ongoing feedback that can be used by instructors to improve their teaching and by students to improve their learning.

It's given at least once in the form of quizzes that is made available for the students at the E-learning site at the end of the block.

Answers are presented instantly after the attempts and discussed on the students groups or in person with the teaching staff

Questions should be consistent with the level of the final exam. The student's attendance is a condition for entering the summative exams. The electronic or paper achievement file must be used to follow up on the students' evaluation, and its completion is a condition for entering the final exams

2. Summative It is used to evaluate student's achievements at the end of an instructional unit. The grades tell whether the student achieved the learning goal or not.

The student's performance will be assessed according to the following:

Assessment task	Type of assessment	Proportion of total assessment			
		%	Marks	Medicine	Chest
End block exam	MCQ	20%	26 marks	13 marks	13 marks
Portfolio	May include inscion academy certificates	10%	13 marks	7 marks	6 marks

Final written Exam 40%	75% MCQ (39 marks) 25 % Short answer and modified essay questions (13 marks)	40%	52 marks	26 marks	26 marks
OSCE final	Typical OSCE . using standardized, real or skill lab encounters	30%	39 marks	19 marks	20 marks
Total		100%	130 marks	65 marks	65 marks

Lecture Outlines

Cardiology lectures:

Lecture (1)

Rheumatic fever

Source:

Kumar & Clark's clinical medicine. 10th edition

Davidson's principles and practice of medicine 23th edition

Specific learning Objectives:

- 1- Identify the definition, pathogenesis and etiology of rheumatic fever
- **2-** Describe the diagnostic criteria, complications and outline the treatment lines and prophylaxis of Rheumatic fever.

Contents:

- Defenition
- Pathogensis
- Clinical presentation
- Diagnosis

- Complications
- Treatment
- Prophylaxis

Lecture (2)

Infective endocarditis

Source:

Kumar & Clark's clinical medicine. 10th edition

Davidson's principles and practice of medicine 23th edition

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 3- Identify the definition, pathogenesis and etiology of infective endocarditis
- **4-** Describe the diagnostic criteria, complications and outline the management and treatment lines and prophylaxis of infecrive endocarditis.

Contents:

- Defenition
- Classification
- Pathogensis
- Clinical presentation
- Diagnosis
- Complications
- Treatment
- Prophylaxis

Lecture (3)

Heart Failure (diagnosis and classification)

Kumar & Clark's clinical medicine. 10th edition

Davidson's principles and practice of medicine 23th edition

Specific learning Objectives

By the end of the lecture the student will be able to:

- Identify definition, classification and causes of HF
- Discuss diagnosis of HF.

Contents:

- Definition of HF.
- Classification of HF.
- Causes of HF
- Diagnosis of HF.

Lecture (3)

Valvular Heart Disease

Kumar & Clark's clinical medicine. 10th edition

Davidson's principles and practice of medicine 23th edition

Specific learning Objectives

By the end of the lecture the student will be able to:

- Describe the anatomy and function of heart valves and their role in cardiac physiology.

- Define valvular heart disease and differentiate between stenosis and regurgitation.
- Identify the causes and risk factors of valvular heart disease, including congenital and acquired conditions.
- Understand the pathophysiology of valvular heart disease, including changes in valve structure, function, and hemodynamics.
- Recognize the clinical manifestations of valvular heart disease, including symptoms and physical exam findings.
- Discuss the diagnostic workup of valvular heart disease, including imaging modalities and laboratory tests.
- Describe the management of valvular heart disease, including medical therapy, valve repair, and valve replacement.
- Understand the complications associated with valvular heart disease, including heart failure, arrhythmias, and endocarditis.

Recognize the importance of prevention and follow-up care in patients with valvular heart disease.

- Apply evidence-based guidelines for the evaluation and treatment of valvular heart disease.

Contents:

- Major causes of valvular heart disease in adults.
- Aortic Stenosis and Regurgitation.
- Mitral Stenosis and Regurgitation
- Mitral valve prolapse.
- Tricuspid Stenosis and Regurgitation.
- Pulmonic Stenosis and Regurgitation.
- Prosthetic Heart Valves.

Lecture (4)

Heart Failure (Treatment)

Kumar & Clark's clinical medicine. 10th edition

Davidson's principles and practice of medicine 23th edition.

Specific learning Objectives:

- Define heart failure and its types.
- Describe the pathophysiology of heart failure, including the mechanisms that lead to its development.
- Identify the signs and symptoms of heart failure.
- Describe the diagnostic tests used to diagnose heart failure, including physical exam findings, lab tests, and imaging studies.
- Identify the various treatment options for heart failure, including medication, lifestyle changes, and surgical interventions.
- Describe the prognosis for heart failure and the factors that can affect it.

- Explain the importance of monitoring patients with heart failure and the different monitoring techniques used in clinical practice.
- Discuss the prevention and management of heart failure exacerbations.
- Identify the potential complications associated with heart failure, including comorbidities such as renal dysfunction, anemia, and thromboembolic events.
- Understand the importance of patient education and the role of healthcare professionals in providing education and support to patients with heart failure.

- Nonpharmacologic treatment of HF.
- Pharmacologic treatment of HF.

Diuretics

Vasodilators

Inotropic Agents

ß Blockers

Anticoagulation

- Refractory Heart Failure

Lecture (5)

Coronary Heart Disease

Kumar & Clark's clinical medicine. 10th edition Davidson's principles and practice of medicine 23th edition Specific learning Objectives:

- Define coronary artery disease and describe its prevalence and impact on public health.
- Understand the anatomy of the coronary arteries and their role in supplying blood to the heart muscle.
- Identify the risk factors for coronary artery disease, including modifiable and non-modifiable factors.
- Describe the pathophysiology of coronary artery disease, including the role of atherosclerosis and the development of plaques in the coronary arteries.
- Explain the clinical manifestations of coronary artery disease, including stable angina, unstable angina, myocardial infarction, and sudden cardiac death.
- Discuss the diagnostic tools used to evaluate coronary artery disease, including electrocardiogram, stress testing, coronary angiography, and imaging techniques such as CT and MRI.
- Describe the various treatment options for coronary artery disease, including lifestyle modifications, medications, and revascularization procedures such as percutaneous coronary intervention (PCI) and coronary artery bypass grafting (CABG.(
- Understand the importance of secondary prevention measures in reducing the risk of future cardiovascular events in patients with coronary artery disease.

- Recognize the importance of interdisciplinary collaboration in the management of patients with coronary artery disease, including the roles of primary care physicians, cardiologists, and other healthcare professionals.

Contents:

- Risk factors of coronary artery disease.
- Clinical presentation
- Angina Pectoris
- Evaluation of the patient with angina

Medical management of stable angina-

Revascularization in patients with angina -

- Variant angina

Lecture (6)

Acute Coronary Syndromes

Kumar & Clark's clinical medicine. 10th edition Davidson's principles and practice of medicine 23th edition

Specific learning Objectives:

By the end of the lecture the student will be able to:

Identify definition and classification of ACS. -

- Discuss diagnostic approach to a case of ACS.

Discuss management of a case of ACS.

Contents:

- definition and classification of ACS.
- diagnostic approach to unstable angina and non-ST-segment elevation myocardial infarction
- treatment of unstable angina and non-ST-segment elevation myocardial infarction
- diagnostic approach to ST-segment elevation myocardial infarction
- Treatment of ST-segment elevation myocardial infarction
- Reperfusion therapy

Complications of Acute Myocardial Infarction-

Lecture (7)

Cardiac Arrhythmias

Kumar & Clark's clinical medicine. 10th edition Davidson's principles and practice of medicine 23th edition

Specific learning Objectives:

- Define cardiac arrhythmia and differentiate it from normal cardiac rhythm.
- Understand the etiology and pathophysiology of cardiac arrhythmia.
- Classify cardiac arrhythmia based on their origin and mechanisms of action.
- Identify the common clinical manifestations of cardiac arrhythmia and its effect on cardiac output.

- Understand the diagnostic tools used for evaluating cardiac arrhythmia, including electrocardiography (ECG) and Holter monitoring.
- Analyze ECG patterns to diagnose and differentiate the various types of cardiac arrhythmia.
- Describe the management options for cardiac arrhythmia, including pharmacological therapy, cardioversion, ablation, and pacemaker implantation.
- Discuss the indications and contraindications of the different management options.
- Understand the potential complications of cardiac arrhythmia and its management.
- Identify the common risk factors for developing cardiac arrhythmia and the strategies to prevent its occurrence.

- Definition of cardiac arrhythmias.
- Types of cardiac arrhythmias

Premature Beats

Bradyarrhythmias

Tachyarrhythmias

Approach to the Patient with Suspected Arrhythmias -

- Management of cardiac arrhythmias.

Pharmacotherapy

Nonpharmacotherapy

Lecture (8)

Pericardial and Myocardial Disease

Kumar & Clark's clinical medicine. 10th edition Davidson's principles and practice of medicine 23th edition Specific learning Objectives:

By the end of the lecture the student will be able to:

Pericardial Disease

- Understand the anatomy and function of the pericardium.
- Identify the different types of pericardial diseases, including acute pericarditis, pericardial effusion, and constrictive pericarditis.
- Recognize the signs and symptoms of pericardial diseases.
- Understand the diagnostic workup for pericardial diseases, including laboratory testing, electrocardiography, echocardiography, and cardiac MRI.
- Learn about the medical and surgical treatment options for pericardial diseases.
- Understand the potential complications of pericardial diseases, including cardiac tamponade and constrictive pericarditis.
- Identify the risk factors and potential causes of pericardial diseases.

Myocardial Diseases:

- Understand the anatomy and function of the myocardium.

- Identify the different types of myocardial diseases, including cardiomyopathy, myocarditis, and ischemic heart disease.
- Recognize the signs and symptoms of myocardial diseases.
- Understand the diagnostic workup for myocardial diseases, including laboratory testing, electrocardiography, echocardiography, and cardiac MRI.
- Learn about the medical and surgical treatment options for myocardial diseases.
- Understand the potential complications of myocardial diseases, including heart failure, arrhythmias, and sudden cardiac death.
- Identify the risk factors and potential causes of myocardial diseases, including genetic predisposition, infection, and lifestyle factors.

- Pericardial Disease

Acute pericarditis

Causes of Pericarditis

Pericardial effusion

Cardiac tamponade

Constrictive pericarditis

- Diseases of the Myocardium.

Myocarditis

Cardiomyopathies

Dilated cardiomyopathy=

Hypertrophic cardiomyopathy=

Restrictive cardiomyopathy=

- =Arrhythmogenic right ventricular
- =Unclassified Cardiomyopathies

Lecture (9)

Arterial Hypertension

Kumar & Clark's clinical medicine. 10th edition

Davidson's principles and practice of medicine 23th edition

Specific learning Objectives:

- Understanding the definition and pathophysiology of arterial hypertension, including risk factors and causes.
- Recognizing the signs and symptoms of hypertension and its complications.
- Identifying the various stages of hypertension and their management, including lifestyle changes and medications.
- Understanding the importance of early diagnosis and appropriate treatment of hypertension to prevent complications such as cardiovascular disease, stroke, and kidney disease.
- Recognizing the role of primary care physicians and specialists in the management of hypertension.

- Understanding the importance of patient education and empowerment in the management of hypertension.
- Identifying the evidence-based guidelines for hypertension management and applying them to clinical practice.
- Understanding the pharmacology and potential adverse effects of antihypertensive medications.
- Recognizing the importance of monitoring and follow-up of hypertensive patients to optimize their treatment and prevent complications.
- Understanding the relationship between hypertension and other comorbidities, such as diabetes and obesity, and their management.

- Staging of Office Blood Pressure
- Essential hypertension
- Secondary hypertension
- Complications of hypertension
- Approach to a case of hypertension.
- Treatment of hypertension

Lecture (10)

Pulmonary Hypertension and Pulmonary Embolism

Kumar & Clark's clinical medicine. 10th edition Davidson's principles and practice of medicine 23th edition

Specific learning Objectives:

- Define pulmonary hypertension and describe the pathophysiology of the disease.
- List the different classifications of pulmonary hypertension and their corresponding etiologies.
- Describe the clinical manifestations of pulmonary hypertension, including symptoms and signs.
- Explain the diagnostic approach to pulmonary hypertension, including imaging and laboratory tests.
- Outline the treatment options for pulmonary hypertension, including medical and surgical interventions.
- Discuss the prognosis of pulmonary hypertension and factors that affect outcome.
- Identify potential complications of pulmonary hypertension and their management.
- Explain the role of multidisciplinary teams in the management of pulmonary hypertension.
- Describe ongoing research and future directions in the field of pulmonary hypertension.
- Define pulmonary embolism and describe its pathophysiology

- Identify the risk factors for pulmonary embolism
- Explain the clinical presentation of pulmonary embolism, including common signs and symptoms
- Discuss the diagnostic tests used to confirm the diagnosis of pulmonary embolism
- Describe the management of pulmonary embolism, including medical and surgical interventions
- Identify the potential complications of pulmonary embolism and their management
- Discuss strategies for preventing pulmonary embolism, including prophylactic measures and early recognition and treatment of risk factors.
- Understand the role of anticoagulant therapy in the management of pulmonary embolism, including appropriate dosing, monitoring, and duration of treatment.

- Definition of pulmonary Hypertension
- Causes of pulmonary Hypertension
- Pathophysiology of pulmonary hypertension
- Clinical presentation and diagnosis of pulmonary hypertension
- Treatment strategies for pulmonary hypertension
- Pulmonary hypertension in specific patient populations (e.g., pediatric patients, pregnant patients)
- Case-based discussions of pulmonary hypertension management
- Emerging therapies for pulmonary hypertension

Multidisciplinary management of pulmonary hypertension

- Pulmonary hypertension in the context of other pulmonary diseases (e.g., COPD, interstitial lung disease)
- Definition of pulmonary embolism
- Causes and risk factors for pulmonary embolism
- Diagnosis of pulmonary embolism
- Treatment of pulmonary embolism

Lecture (11)

Shock

Kumar & Clark's clinical medicine, 10th edition

Davidson's principles and practice of medicine 23th edition

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Identify the definition, pathogenesis, etiology and classification of Shock
- **2-** Describe the clinical presentation, complications and outline the management and treatment lines and prophylaxis of different types of shock.

Contents:

- Defenition
- Classification
- Pathogensis
- Clinical presentation

- Diagnosis
- Complications
- Treatment
- Prophylaxis

Outlines of topics for self- directed learning and case based discussions

Case(1):

Rheumatic fever and Infective Endocarditis

First Aid for USEMLE step 2 CK, 2nd edition,,

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 2- Select the appropriate investigations.
- 3- Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with Rheumatic fever and Infective Endocarditis.

Case (2):

Mitral stenosis

Internal Medicine Correlation and Clinical Scenarios for USMLE Step 3, 1st Edition, Chapter 1, P. 51

Mitral regurgitation case

Internal Medicine Correlation and Clinical Scenarios for USMLE Step 3, 1st Edition, Chapter 1, P81, First id cases P. 62

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 2- Select the appropriate investigations.
- 3- Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with mitral stenosis/ mitral regurgitation.

Case (3):

Aortic stenosis

Internal Medicine Correlation and Clinical Scenarios for USMLE Step 3, 1st Edition, Chapter 1, .45, First aid cases P. 46

Aortic regurgitation

First Aid cases p.34

Specific learning Objectives:

- 1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 2- Select the appropriate investigations.
- 3- Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with a ortic valve disease (stenosis/ regurgitation).

Case (4):

Prosthetic valve and anticoagulation

Handout/Amboss website

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 4- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 5- Select the appropriate investigations.
- 6- Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with prosthetic valves on anticoagulants.

Case (5):

Congestive Heart Failure

Internal Medicine correlation & clinical scenarios p.37, First aid cases p. 39, 45

Specific learning Objectives:

By the end of the lecture the student will be able to:

1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.

Case (6):

Congestive heart failure

Internal Medicine Correlation and Clinical Scenarios for USMLE Step 3, 1st Edition, Chapter 1, P. 37

First Aid for USEMLE step 2 CK, 2nd edition, chapter 1 case 12 diastolic heart failure p. 45

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 2- Select the appropriate investigations.
- 3- Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with heart failure..

Case(7):

Hypertension case

Internal Medicine Correlation and Clinical Scenarios for USMLE Step 3, 1st Edition, Chapter 6, case 10, P 375,

First Aid for USEMLE step 2 CK, 2nd edition, Chapter 1, p. 48,

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 2- Select the appropriate investigations.
- 3- Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with essential hypertension.

Case (8):

Chest pain and stable angina

First Aid for USEMLE step 2 CK, 2nd edition,, p29 (crescendo Angina), P31 Aortic dissection, DD chest pain

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 2- Select the appropriate investigations.
- 3- Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with chest pain.

Case (9):

acute coronary syndrome:

Internal Medicine Correlation and Clinical Scenarios for USMLE Step 3, 1st Edition,
Chapter 1
, P. 42,

First Aid for USEMLE step 2 CK, 2nd edition,, 33, 55, 57

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 2- Select the appropriate investigations.
- 3-Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with acute coronary syndrome.

Case (10):

Supraventricular Tachycardia, Ventricular Tachycardia, and Wolff-Parkinson-White Syndrome

Internal Medicine Correlation and Clinical Scenarios for USMLE Step 3, 1st Edition, Chapter 1p. 61,

First Aid for USEMLE step 2 CK, 2nd edition, case p. 65

Atrial Fibrillation

Internal Medicine Correlation and Clinical Scenarios for USMLE Step 3, 1st Edition, Chapter 1p.57,

First Aid for USEMLE step 2 CK, 2nd edition, case p. 35

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 2- Select the appropriate investigations.
- 3-Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with atrial fibrillation and supraventricular tachycardia.

Case (11):

Myocardial and pericardial disease

First Aid for USEMLE step 2 CK, 2nd edition P. 37, 43, 51, 59

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 2- Select the appropriate investigations.
- 3-Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with pericardial effusion, hypertrophic and dilated cardiomyopathy

Case(12): Shock

First Aid for USEMLE step 2 CK, 2nd edition,

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Integrate the results of history, physical examination and laboratory test findings into a meaningful diagnostic formulation.
- 2- Select the appropriate investigations.
- 3- Construct appropriate management algorithm (both diagnostic and therapeutic) for patients with Shock.

Practical sessions outlines

- 1. Obtain and record informative history.
- 2. Examine the patients systematically appropriate to the age, gender, and clinical presentation of the patient while being culturally sensitive.

.

- 3. Design and /or present a structured, patient centered history and an appropriately timed full physical examination of patients.
- 4. Show how to do proper general chest and cardiac examination and interpret imaging.
- 5. Show how to examine for cyanosis in respiratory failure.
- 6. Describe how to obtain a sample of arterial blood gases, how to use nebulizer for inhalation therapy and basics of oxygen therapy.
- 7. Show how to interpret pulmonary function tests, ABGs and ECG.
- 8. Integrate the results of history, physical examination, and laboratory test findings into a meaningful diagnostic formulation.
- 9. Apply measures that promote patient safety.
- 10.Apply suitable measures for infection control when dealing with the patients and instruments.
- 11. Construct appropriate management algorithm (both diagnostic and therapeutic) for patients.

Lecture Outlines of Pulmonology

Source (Electronic book- Chest department- Sohag University)

Lecture (1)

Chronic Obstructive Pulmonary Diseases (COPD)

Specific learning Objectives

By the end of the lecture the student will be able to:

- Mention definition and etiology,
- Identify symptoms, diagnosis, and management of stable COPD.
- Describe symptoms and management of acute exacerbation of COPD.

Contents:

- Definition.
- Types and pathogenesis.
- Clinical manifestation, diagnosis, and management.
- Acute exacerbation.

Lecture (2)

Bronchial Asthma

Specific learning Objectives:

By the end of the lecture the student will be able to:

- Identify bronchial asthma and its types

- Describe clinical presentations
- -Describe Diagnosis and treatment of asthma patients

- Definition.
- Classification of asthma.
- Management of asthma.
- -Pathological conditions associated with asthma

Lecture (3)

Pneumonia

Specific learning Objectives

By the end of the lecture the student will be able to:

- Identify Community-acquired pneumonia (CAP) and Hospital-acquired pneumonia

(HAP) causative organisms.

- Identify clinical picture and diagnostic approach in a case of pneumonia.
- Identify lines of treatment in both CAP and HAP

Contents:

- Definition of CAP and HAP.
- Causative organisms.
- Pathophysiology
- Diagnosis
- Treatment

Lecture (4)

Suppurative Lung Diseases (bronchiectasis and lung abscess)

Specific learning Objectives:

By the end of the lecture the student will be able to:

- Identify a case of bronchiectasis.
- Differentiate between CF and non-CF bronchiectasis.
- Describe diagnostic approach and management to a case of lung abscess.

Contents:

- Definition, clinical presentation, and management of non-CF bronchiectasis.
- Definition, clinical presentation, and management of CF bronchiectasis.
- Definition, clinical presentation, and management of lung abscess.

Lecture (5)

Tuberculosis

Specific learning Objectives:

By the end of the lecture the student will be able to:

- Describe etiology and modes of infection transmission.
- Identify clinical presentation of pulmonary tuberculosis.
- Identify diagnostic lines in a case of pulmonary tuberculosis.
- Describe diagnosis and treatment in a case of Latent TB infection.

Contents:

- Etiology and modes of transmission.
- Clinical Presentation.
- Methods for Diagnosis.
- Complications.
- Lines of Treatment.
- Latent TB; diagnosis and treatment.

Lecture (6)

Interstitial Pulmonary Fibrosis

Specific learning Objectives:

By the end of the lecture the student will be able to:

- Define IPF and determine histopathology.
- Identify clinical manifestations.
- Identify classification of IPF.
- Describe diagnostic approach to a case of IPF.
- Describe main lines of treatment.

Contents:

- Definition, pathogenesis and histopathology.
- Clinical manifestations
- Diagnostic criteria.
- Lines of treatment.
- Prognosis.

Lecture (7)

Lung Tumors

Specific learning Objectives:

By the end of the lecture the student will be able to:

- Identify risk factors and pathology of Lung tumors.
- Identify clinical presentation.
- Outline diagnostic modalities in a case of Lung cancer.
- Outline different lines of treatment.

Contents:

- Risk Factors and pathological classification.
- Clinical manifestations, diagnosis and treatment of Lung Cancer.
- Screening for Lung Cancer.

Lecture (8)

Respiratory Failure and ARDS

Specific learning Objectives:

By the end of the lecture the student will be able to

- Define RF.
- -Detect types of RF.
- -Recognize diagnosis and management of RF.
- Define ARDS and causes, diagnosis and treatment.

Contents:

- Definition and classification.
- Pathogenesis and etiology.
- Clinical picture and blood gas criteria for each type.
- Management of each type of Respiratory Failure.
- Definition, causes, diagnosis and treatment of ARDS.

Lecture (9)

Pulmonary Embolism

Specific learning Objectives:

By the end of the lecture the student will be able

- Identify causes and clinical manifestations of pulmonary embolism.
- Describe clinical approach to management of a case of pulmonary embolism.

Contents:

- Risk factors, etiology, clinical manifestations of PE.
- Diagnostic approach and treatment of PE including different therapeutic lines of treatment including their role and possible side effects.

Lecture (10)

Pleural Effusion

Specific learning Objectives:

By the end of the lecture the student will be able to

- Identify a case of pleural effusion and determine causes of transudative and exudative pleural effusion.
- Describe different modalities for diagnosis of pleural effusion.
- Outline different lines of treatment.

Contents:

- Definition.
- Causes of transudate and exudative pleural effusion.
- Clinical picture.
- Modalities for diagnosis

- Lines of treatment.

Lectures (11)

Pneumothorax

Specific learning Objectives:

By the end of the lecture the student will be able to:

- Define Pneumothorax
- Identify classification of Pneumothorax and Clinical presentation.
- Outline Investigations and Lines of treatment.

Contents:

- Definition and classification of Pneumothorax.
- Clinical presentation of Pneumothorax
- Investigations
- Lines of treatment.

Lecture (12)

Mediastinum and mesothelioma

Specific learning Objectives:

By the end of the lecture the student will be able to:

-

- Describe the compartments of the mediastinum.
- Enumerate different mediastinal space occupying lesions according to their site.
- Demonstrate clinical picture of mediastinal syndrome.
- Identify different modalities for diagnosis
- Plan for patient management.
- Identify Pleural Tumors, Mesothelioma, risk factors, pathology clinical picture and treatment.

- Anatomy and compartments of the mediastinum.
- Contents of the mediastinum.
- Disorders of the mediastinum.
- Clinical presentation and investigation of mediastinal syndrome.
- Clinical presentation, investigations and line of ttt of Mesothelioma.

Lectures (13)

Core pulmonale and Pulmonary hypertension

Specific learning Objectives:

By the end of the lecture the student will be able to:

- 1- Definition, Pathogenesis, causes, clinical pictures, investigations and treatment of Corpulmonale.
- 2- Describe definition, clinical classification, pathophysiology, clinical features, investigations and line of treatment of pulmonary hypertension.

Contents:

Pulmonary hypertension and Corpulmonale:

- 1- Definition.
- 2- Classification
- 3- Pathogenesis
- 4- Clinical features
- 5- Diagnosis
- 6- Treatment

Lecture (14)

Breathing related Sleep disorders

Specific learning Objectives:

By the end of the lecture the student will be able to:

- Determine Sleep disorders mainly Sleep apnea both central and obstructive sleep apneas and method for diagnosis.

Contents:

- Central sleep apnea
- Obstructive sleep apnea
